

SUMMER WATERING GUIDE

Summer is the season your soil loses the most water, and why we recommend watering roughly an hour per week per zone in full sun. One of the biggest mistakes you can make with your lawn's overall health is to not water properly for the season.

We recommend that you water in ten-minute bursts two days per week at 2 am, 4 am, and 6 am during the summer.

These guidelines are for full sun areas. In shaded areas, reduce by half (or more if you have a lot of shade.) Also, remember that many of the newer sprinkler controllers have a seasonal adjustment that is easy to use with our watering guidelines.

Important Note for Rotary Head Sprinklers and Drip Systems:

If you have rotary head sprinklers (they slowly turn and send out long streams of water), we recommend running twice as long as regular sprinklers since it takes them longer to put out the same amount of water. Drip Zones (drip systems work by maintaining moisture in the soil.) We recommend that they run daily in the summer for ten minutes. Since various drip lines water slightly differently, paying attention to your beds is vital to ensure they get the appropriate amount of water.

Mosquito Control: Bid Farewell to Pesky Mosquitoes this Summer

We're excited to introduce our new Mosquito Control Plans, designed to provide unparalleled protection against these pesky intruders. Our comprehensive mosquito reduction service goes beyond typical residential or municipal efforts. With meticulous planning and execution, we prioritize maximum effectiveness while ensuring safety for you, your family, and your pets. Don't let mosquitoes ruin your outdoor enjoyment any longer. Visit our updated website for more information on our advanced Mosquito Control Plans, and give us a call today to schedule your first appointment.
